Table of Contents

01

Prompt Engineering

- 1.1 What Is a Prompt?
- 1.2 Bad vs Good Prompts
- 1.3 The Prompt Formula

02

AI for Content Creation

- Part 1: AI Poster Creation
- Part 2: AI Video Creation (HeyGen)
- Final Class Challenge

03

AI for Income — Your Personal Job Assistant

- Part 1: Understanding AI
- Part 2: Create Your CV
- Part 3: Apply AI to a Real Job
- Part 4: Write a Job Application Email
- Final Challenge

04

AI for Research — Learn Faster with Smart Sources

- What Is AI Research?
- Choosing a Research Topic
- Using NotebookLM
- Uploading Sources
- Asking Smart Questions

05

AI for Website Development

- Part 1: E-Commerce Idea & Brand Name
- Part 2: Generate with AI (Lovable AI)
- Part 3: Customize Your Store
- Part 4: Publish Your Site

Prompt Engineering

Master the art of giving AI clear, powerful instructions

■ Learning Objectives

- Understand what a prompt really is
- Know how to control AI output
- Turn bad prompts into powerful ones
- Use AI for real-life tasks
- Feel like: "I can get AI to do exactly what I want"

1.1 What Is a Prompt?

A **prompt** is the instruction you give to AI.

■ **Deeper truth:** A prompt is how you **PROGRAM** AI using language.

■ **Key Lesson:** "The quality of your prompt = the quality of your result"

Example Comparison

■ Weak Prompt	■ Strong Prompt
"Write about money" Output = boring, general ■	"Act as a financial advisor. Explain how a university student in Kenya can start saving money with Ksh 500 per week. Give practical steps." Output = specific, useful ■

1.2 Bad vs. Good Prompts

Bad Prompts

- Too short
- No context

- No direction
- No structure

Example: "Tell me about business"

AI doesn't know: What type? For whom? What level?

Good Prompts Include:

- Clear goal
- Context
- Specific instructions

■ Good Prompt Example

"Explain 3 small business ideas a beginner in Mombasa can start with less than Ksh 5,000. Keep it simple and practical."

1.3 The Prompt Formula

Use this formula every time you write a prompt:

■ ROLE — Who should AI act as?

- Teacher
- Business expert
- Doctor
- Developer
- Marketer

■ TASK — What should it do?

- Explain
- Create
- Analyze
- Suggest

■ CONTEXT — Extra details

- Location (Kenya)
- Audience (beginner)

- Budget
- Goal

■ OUTPUT FORMAT — How should it respond?

- List
- Steps
- Table
- Short paragraph

■ Full Example Using the Formula

"Act as a business coach (Role). Suggest 5 online businesses (Task) for a student in Kenya with no capital (Context). Give a step-by-step explanation (Output)."

02

AI for Content Creation

Live Practical Session — Poster, Caption & Video

■ Session Goals

- Create a professional poster using AI
- Write captions, hashtags, and post content
- Create a marketing/explainer video using AI avatars
- Download and use your content in real life

PART 1 — AI Poster Creation

■ Project Choice: Event Invitation Poster

You are creating a real event poster — such as a church event, business event, wedding, or seminar.

STEP 1 — Generate Poster Content (AI)

📌 Prompt 1 — Content Creation

Act as a professional event planner. Create clean and attractive event invitation details for a poster. Include: • Event title • Date • Time • Venue • Short description Make it short, clear, and elegant.

STEP 2 — Generate Poster Design

Take the content into an AI image generator.

■ Prompt 2 — Poster Design

Create a professional and elegant event invitation poster. Use modern typography, soft gradient background, and minimal design. Include the event details clearly. Make it visually attractive, clean, and suitable for social media sharing (Instagram, WhatsApp, LinkedIn).

STEP 3 — Review Your Poster

Check:

- Is it readable?

- Is it clean?
- Is the information clear?

STEP 4 — Write Caption + Hashtags

Prompt 3 — Caption

Write a short, engaging social media caption for this event poster. Start with a strong hook, make it exciting, and include a call to action. Keep it simple and human.

■ Prompt 4 — Hashtags

Generate 10 relevant hashtags for promoting an event like this on social media.

STEP 5 — How to Post

Post on:

- WhatsApp Status
- Instagram Feed
- Facebook
- LinkedIn (if professional event)

Include:

- Poster image
- Caption
- Hashtags

■ **Tip: Content without posting is useless. Execution is the skill.**

PART 2 — AI Video Creation with HeyGen

■ **Project:** Marketing or Explainer Video

■ **Asset Reference:** Demo video → assets/Yaris_Institute.mp4 (watch this before starting HeyGen)

STEP 1 — Create Your Script

Prompt 5 — Video Script

Write a short, engaging 30–45 second video script for a marketing/explainer video about [choose: product, service, or event]. Make it simple, clear, and persuasive.

STEP 2 — Use HeyGen

■ Go to: <https://app.heygen.com/>

STEP 3 — Create Your Video

Inside HeyGen:

1. Choose an avatar
2. Paste your script
3. Select a voice
4. Generate the video

STEP 4 — Download Your Video

- Wait for rendering to complete
- Download the MP4 video

STEP 5 — Where to Use Your Video

- WhatsApp Status
- Instagram Reels
- Facebook
- LinkedIn
- Marketing ads

■ Class Challenge

■ Task: Create BOTH an Event Poster AND an AI Video.
Then: write your caption and post both online.

■ Key Lesson: You are not just learning tools. You are learning a system: Idea
→ Content → Design → Video → Posting

■ Final Message to Students

If you can create visuals, create videos, write captions, and publish content...

■ You already have a digital income skill.

03

AI for Income

Your Personal Job Assistant — CV, Cover Letter & Applications

■ Lesson Goal

- Create a professional CV using AI
- Generate a tailored cover letter
- Write a job application email
- Apply to jobs faster and smarter using AI

Part 1 — Understanding AI (Very Important)

AI is not magic. AI follows **your instructions (prompts)**.

- If your instruction is weak → output is weak
- If your instruction is clear → output is powerful

■ Bad Prompt	■ Good Prompt
"Make me a CV"	"Act as a professional CV writer. Ask me structured questions (education, skills, experience, projects). After collecting my answers, generate a clean, ATS-friendly CV."

Part 2 — Create Your CV Using AI

Step 1 — Use This Prompt

📄 ■ CV Generation Prompt

Act as a professional CV writer. Ask me structured questions one by one about my education, skills, experience, and projects. After I answer, generate a clean, modern, ATS-friendly CV.

Step 2 — Answer the Questions

- Be honest
- Be clear
- Give enough detail

Step 3 — Generate Your CV

- Review the CV
- Make corrections if needed

Step 4 — Export Your CV

Save your CV as:

- PDF (recommended)
- Word document

Part 3 — Apply AI to a Real Job

Now we simulate a real job application.

■ **Asset Reference: Job poster image** → `assets/Job_poster.png` (display or share this with students during the session)

Step 1 — Upload to AI

Upload:

- Your CV
- The job post (image or text)

Step 2 — Use This Prompt

Cover Letter Prompt

Analyze this job post and my CV. Create a tailored, professional cover letter that matches my skills with the job requirements. Keep it clear, confident, and human.

Step 3 — Generate Your Cover Letter

- Read it carefully
- Make small edits if needed

Step 4 — Export It

Save as:

- PDF or Word document

Part 4 — Write a Job Application Email

Step 1 — Use This Prompt

Application Email Prompt

Write a professional job application email using my cover letter. Keep it short, clear, and polite.

Step 2 — Review Your Email

Make sure:

- It sounds natural
- It is not too long
- It includes your intention clearly

Step 3 — Final Application

You now have:

- ■ CV
- ■ Cover Letter
- ■ Email — You are ready to apply!

■ Class Challenge

■ Apply this process to 3 different jobs.

Each time: adjust your prompt slightly and improve your results.

■ Key Lesson: AI will not get you a job. But knowing how to use AI gives you an unfair advantage.

■ Tip: Don't just copy results. Ask yourself: Why did this prompt work? How can I improve it? That's how you become powerful with AI.

■ You now have a skill that most people don't.
Use it.

04

AI for Research

Learn Faster with Smart Sources

■ Lesson Goal

- Use AI to gather and organize information
- Upload and analyze documents/videos using AI tools
- Ask smart questions from sources

What Is AI Research?

AI research means using AI to understand a topic faster by analyzing documents, videos, and sources.

Instead of reading everything manually, AI helps you:

- Summarize
- Explain
- Compare
- Answer questions

Part 1 — Choose a Research Topic

■ **Topic for Today:** "How AI is Changing Jobs and Income Opportunities"

Part 2 — Use a Source (Real Document / Video)

■ **Asset Reference:** PDF Article →

[assets/documents/The_Role_of_AI_and_Automation_on_the_Fut.pdf](#) (open and share this with students)

■ **YouTube Video:** https://youtu.be/p_kF_SDB0-c

Tool to Use — NotebookLM

■ NotebookLM by Google — <https://notebooklm.google/>

Part 4 — Upload Sources into NotebookLM

1. Open NotebookLM
2. Upload: your AI-generated article OR PDF, and your video (or link)
3. Let AI process the content

Part 5 — Ask Smart Questions

Now you don't just read — you **interrogate** the source.

Example Questions to Ask NotebookLM:

What are the main ways AI is changing jobs?

Which jobs are most affected by AI?

How can beginners use AI to create income?

Summarize this in 5 simple points.

Give me real-life examples from the content.

■ **Tip: Good researchers don't just read. They ask better questions.**

■ Class Challenge

1. Upload your source into NotebookLM.
2. Ask 5 meaningful questions.
3. Summarize the answers into simple notes.

05

AI for Website Development

Build a Full E-Commerce Store — No Coding Required

■ Lesson Goal

- Generate an e-commerce business idea using AI
- Create a full online shop using AI website builders
- Understand product pages, cart flow, and checkout basics
- Publish a working e-commerce website without coding

Part 1 — Create Your E-Commerce Idea + Brand Name

Before building, we need a clear store idea.

■ Example Idea	■■ Website Name
Online Fashion Store (Clothes & Shoes)	Yaris Shop

Part 2 — Generate Your E-Commerce Website with AI

■ **Tool to Use:** Lovable AI — <https://lovable.dev>

🛠️ E-Commerce Website Builder Prompt

Create a modern, clean e-commerce website called "Trendora Shop". It is an online fashion store selling clothes and shoes. The website should include: • Homepage with hero section and featured products • Product listing page with images and prices • Product detail page • Shopping cart page • Checkout page design • About and Contact page Make it professional, mobile-friendly, and visually appealing.

Inside Lovable AI:

1. Paste the prompt
2. Click generate

3. Let AI build the full store

Part 3 — Customize Your Store

You can improve:

- Product names
- Prices (make them realistic)
- Colors and branding
- Sections and layout

Part 4 — Publish Your E-Commerce Site

1. Click publish
2. Get your live link
3. Test your store like a customer

Where to Share Your Store:

- WhatsApp
- Instagram bio
- LinkedIn
- Portfolio

■ **Key Lesson: The workflow is: Idea → Prompt → AI → Store → Sales-Ready Website**

■ **You already have real e-commerce development skills.**
